

PURPOSE

SS Pulling Tools are used to employ external fishnecks on subsurface devices inside the wellbore. These pulling tools have intermediate cores with medium reach. The tool is used to retrieve subsurface tools where debris might block the latching of fishneck.

ASSEMBLY PARTS

1. Fishneck
2. Skirt
3. Shear Pin Cover
4. Core Nut
5. Core Spring
6. Dog Washer
7. Dog Spring
8. Dog
9. Core

OPERATION

The SS is jar down to shear tool, which may be used in either setting, or the retrieving of subsurface tools.

Used when there is a need to jar down to shear, but also when there is a need to have extended reach such as latching a fishneck with broken wire.

The core may be easily changed out in the field to allow for deeper or shallower reach depending on the application.

PRECAUTIONS

Care should be taken to inspect the dogs, skirt, and fishneck for damage such as metal fatigue, cracking, or deformity of the metal.
